## **Mastering 'Metrics: The Path from Cause to Effect**

Our Path Our path begins with experimental random assignment, both as a framework for causal questions and a bench-mark by which the results from other methods are judged. We illustrate the awesome power of random assignment through two randomized evaluations of the effects of health insurance. The appendix to this chapter also uses the

Many obstacles litter the path from cause to effect, and the raw data often refuse to reveal the way to causal enlightenment. In a new book written primarily for undergraduate economics students (but also, we hope, for policy makers and an economically literate citizenry), we explain how masters of the 'metric trade uncover reliable evidence of causal connections.

Metrics are the network variables used in deciding what path is preferred in terms of these metrics. For some routing protocols these metrics are static and may not be changed. For other routing protocols these values may be assigned by a network administrator. The most common metric values are hop, bandwidth, delay, reliability, load, and cost.
